

# Annual Progress Report (APR)

2024 Air Quality Annual Progress Report (APR) for South Ayrshire Council

In fulfilment of Part IV of the Environment Act 1995, as amended by the Environment Act 2021

Local Air Quality Management

June 2024

**South Ayrshire Council**

<b>Information</b>	<b>South Ayrshire Council</b>
<b>Local Authority Officer</b>	Brian Seditas
<b>Department</b>	Chief Executive's Office
<b>Address</b>	5-7 River Terrace, Ayr KA8 0BJ
<b>Telephone</b>	01292 618222 direct dial 01292 616399
<b>E-mail</b>	Brian.seditas@south-ayrshire.gov.uk
<b>Report Reference Number</b>	SAC/PR/2024
<b>Date</b>	June 2024

## Executive Summary: Air Quality in Our Area

### Air Quality in South Ayrshire

The air quality within South Ayrshire remains very good. The majority of air pollution present is as a result of transport sources primarily road traffic fuelled with petrol or diesel. With the gradual move away from those fuel sources to electric vehicles it is expected we will continue to enjoy an improvement in air quality.

South Ayrshire has no air quality management areas (AQMA's) or action plans.

In 2023 the NOX tubes locations are unchanged but we are considering relocating one for 2024

### Actions to Improve Air Quality

During 2023, we were only able to carry out limited idling enforcement patrols throughout the district. These were targeted around schools in an attempt to reduce drivers allowing their vehicles to idle unnecessarily. We are hoping to carry out more of these patrols in 2024 should resources allow.

In 2023 we delivered a limited number of talks to primary school children on air quality and the importance of using active forms of travel where possible. We are intending to offer this to the primary schools in 2024

### Local Priorities and Challenges

The majority of the air quality pollutants arising within SAC are as a result of road traffic. Therefore, in order to reduce the impact, we intend to carry out vehicle idling enforcement over the coming year. With the assistance of funding from the Scottish Government in 2016 we fitted our two real-time TEOM monitors with PM<sub>2.5</sub> inlets in order to assess the levels of that pollutant within SAC. Results of monitoring for that pollutant are now available. In 2021 we secured funding from the Scottish Government to update our two TEOM FDMS monitors to FIDAS monitors. This new equipment permits us to accurately monitor PM<sub>2.5</sub> and PM<sub>10</sub> levels simultaneously.

### How to Get Involved

#### Members of the Public Can Assist to Improve Air Quality by:

- using active transport or public transport where possible instead of driving. If it is necessary to drive, consider changing to a low polluting vehicle or using an electric vehicle
- ensuring if you do drive that you don't leave your engine idling any longer than necessary. In addition to polluting the air and producing greenhouse gases you could be served with a fixed penalty notice and make sure your car is well maintained

- avoiding garden bonfires – instead recycle or utilise your brown refuse bin for garden waste
- reporting badly polluting buses or lorries as follows: <https://www.gov.uk/report-smoky-vehicle>
- using electric powered lawn and garden equipment instead of petrol.

Our website has links to the two real time monitors results for PM<sub>10</sub>, PM<sub>2.5</sub> and NO<sub>2</sub>. These can be accessed as follows:

Ayr High Street site: <https://www.scottishairquality.scot/latest/site-info/AYR>

Ayr Harbour Site: <https://www.scottishairquality.scot/latest/site-info/HARB>

Previous air quality reports are also available from our website as follows:

<https://archive.south-ayrshire.gov.uk/environmentalhealth/publichealth/airquality.aspx>

# 1 Local Air Quality Management

This report provides an overview of air quality in South Ayrshire during 2023. It fulfils the requirements of Local Air Quality Management (LAQM) as set out in Part IV of the Environment Act (1995), as amended by the Environment Act (2021), and the relevant Policy and Technical Guidance documents.

The LAQM process places an obligation on all local authorities to regularly review and assess air quality in their areas, and to determine whether or not the air quality objectives are likely to be achieved. Where an exceedance is considered likely the local authority must declare an Air Quality Management Area (AQMA) and prepare an Air Quality Action Plan (AQAP) setting out the measures it intends to put in place in pursuit of the objectives. This Annual Progress Report (APR) summarises the work being undertaken by South Ayrshire to improve air quality and any progress that has been made.

**Table 1.1 – Summary of Air Quality Objectives in Scotland**

<b>Pollutant</b>	<b>Air Quality Objective Concentration</b>	<b>Air Quality Objective Measured as</b>	<b>Date to be Achieved by</b>
Nitrogen dioxide (NO <sub>2</sub> )	200 µg/m <sup>3</sup> not to be exceeded more than 18 times a year	1-hour mean	31.12.2005
Nitrogen dioxide (NO <sub>2</sub> )	40 µg/m <sup>3</sup>	Annual mean	31.12.2005
Particulate Matter (PM <sub>10</sub> )	50 µg/m <sup>3</sup> , not to be exceeded more than 7 times a year	24-hour mean	31.12.2010
Particulate Matter (PM <sub>10</sub> )	18 µg/m <sup>3</sup>	Annual mean	31.12.2010
Particulate Matter (PM <sub>2.5</sub> )	10 µg/m <sup>3</sup>	Annual mean	31.12.2021
Sulphur dioxide (SO <sub>2</sub> )	350 µg/m <sup>3</sup> , not to be exceeded more than 24 times a year	1-hour mean	31.12.2004

<b>Pollutant</b>	<b>Air Quality Objective Concentration</b>	<b>Air Quality Objective Measured as</b>	<b>Date to be Achieved by</b>
Sulphur dioxide (SO <sub>2</sub> )	125 µg/m <sup>3</sup> , not to be exceeded more than 3 times a year	24-hour mean	31.12.2004
Sulphur dioxide (SO <sub>2</sub> )	266 µg/m <sup>3</sup> , not to be exceeded more than 35 times a year	15-minute mean	31.12.2005
Benzene	3.25 µg/m <sup>3</sup>	Running annual mean	31.12.2010
1,3 Butadiene	2.25 µg/m <sup>3</sup>	Running annual mean	31.12.2003
Carbon Monoxide	10.0 mg/m <sup>3</sup>	Running 8-Hour mean	31.12.2003

## 2 Actions to Improve Air Quality

### 2.1 Air Quality Management Areas

Air Quality Management Areas (AQMAs) are declared when there is an exceedance or likely exceedance of an air quality objective. After declaration, the authority must prepare publish and implement an Air Quality Action Plan (AQAP) within the shortest possible time and no later than 12 months of the date of AQMA Designation Order. The AQAP must set out measures the local authority intends to put in place in pursuit of the objectives within the shortest possible time Measures should be provided with milestones and a final date for completion. The action plan itself should have a timescale for completion and for revocation of the AQMA. Where measures to reduce air pollution may require a longer timescale an action plan shall be reviewed and republished within five years of initial publication and then five-yearly thereafter.

South Ayrshire Council currently does not have any AQMAs. nor have there been any within South Ayrshire in the past.

### 2.2 Cleaner Air for Scotland 2

[Cleaner Air for Scotland 2 – Towards a Better Place for Everyone \(CAFS2\)](#) is Scotland's second air quality strategy. CAFS2 sets out how the Scottish Government and its partner organisations propose to further reduce air pollution to protect human health and fulfil Scotland's legal responsibilities over the period 2021 – 2026. CAFS2 was published in July 2021 and replaces [Cleaner Air for Scotland – The Road to a Healthier Future \(CAFS\)](#), which was published in 2015. CAFS2 aims to achieve the ambitious vision for Scotland "to have the best air quality in Europe". A series of actions across a range of policy areas are outlined, a summary of which is available on the Scottish Government's website.

Progress by South Ayrshire Council against relevant actions for which local authorities are the lead delivery bodies within this strategy is demonstrated below.

### **2.2.1 Placemaking – Plans and Policies**

Local authorities with support from the Scottish Government will assess how effectively air quality is embedded in plans, policies, City Deals and other initiatives, and more generally in cross departmental working, identifying and addressing evidence, skills, awareness and operational gaps.

South Ayrshire Council has been working closely with the local community to produce place plans. The plans can be found here: [www.south-ayrshire.gov.uk/thriving-places/](http://www.south-ayrshire.gov.uk/thriving-places/) within those plans there are a number of measures designed to increase the use of “green transport” eg “ Ayr North should be a place that is safe and welcoming to move around on foot and by cycle. Traffic and parking arrangements should allow people to move around safely. It should have a public transport network that meets the needs of the community.”

South Ayrshire Council has introduced a carbon budget tracker for each service with a view to reducing the carbon footprint of the organisation.

### **2.2.2 Transport – Low Emission Zones**

Local authorities working with Transport Scotland and SEPA will look at opportunities to promote zero-carbon city centres within the existing LEZs structure.

South Ayrshire Council has no Low Emission Zones established within the Local Authority area. Within South Ayrshire, part of the ruling Conservative party’s manifesto was that they would look at introducing such a zone within Ayr Town Centre.

Part of the Stagecoach bus fleet has been replaced with Electric buses and this should reduce the impact on air quality

## **2.3 Implementation of Air Quality Action Plan(s) and/or measures to address air quality**

In order to ensure that local authorities implement the measures within an action plan by the timescales stated within that plan, the Scottish Government expects authorities to submit updates on progress through the APR process. South Ayrshire Council has taken forward a number of measures within the action plan during the current reporting year of 2022 in pursuit of improving local air quality and meeting the air quality objectives within the shortest possible time. Details of all measures completed, in progress or planned are set out in

Table 2.1.

Key completed measures for this reporting year are:

- Electric bin lifting equipment where possible will be fitted to all heavy RCVs
- Fleet Management Review is developing and putting in place a hierarchy of travel guidelines

South Ayrshire Council expects the following measures to be completed over the course of the next reporting year:

Table 2.1 – Progress on Measures to Improve Air Quality

Measure No.	Measure	Category	Expected/ Actual Completion year	Measure Status	Funding Status	Key Milestones	Progress	Barriers to implementation
1	Active Travel Hub project	Alter-natives to private vehicle use	Ongoing	ceased	<Not funded			The active travel hubs ceased due to lack of external funding
2	Introduction of a car club	Alter-natives to private vehicle use	2024	In progress	Not funded		Report commissioned into feasibility. Feedback very positive	The Car Club introduction is still being considered as part of the ongoing Fleet Review Project with various suppliers providing demonstrations of their systems. Regular meetings are being held with Change Programme colleagues.
3	Bicycle Rental	Alter-natives to private vehicle use	Ongoing	In progress	Not funded		ongoing project	The abellio bikes are no longer being rented via the hub as the hub were asked to pay for providing this service. Abellio still have a contractual requirement to provide this bike service from the station, so it is hoped they will do so in future. Alternative ways to make the hub fleet of bikes / bikes generally available to workplaces and the public at other locations are now

								being investigated and arrangements being made through the hub project.
4	Promotion of renewable Energy	Promoting low emission plants	Ongoing	In progress	Not funded		ongoing	Building and commissioning of a new A+ Energy Performance Certificate office and welfare building within Bridge Street Depot in Girvan has now been completed.
5	Vehicle fleet efficiency Several electric vehicles are being procured for use by council staff. In addition a number of charging points are being installed throughout the district	Promoting low emission transport	2025	In progress	Not funded		ongoing	This programme continues to replace internal combustion vehicles with electric powered vehicles where feasible. Electric vehicles that are at lease end are also now being replaced.
6	Electric bin lifting equipment where possible will be fitted to all heavy RCVs. This results in the vehicle engine operating at lower revs (when lifting bins) which reduces fuel consumption, vehicle exhaust emissions and noise levels.	Promoting low emission plant	Ongoing	In progress	Not funded		ongoing	All Heavy Fleet RCV's continue to be replaced at lease end with electric lifting gear specified.
7	Vehicle fleet efficiency Large Goods Vehicles (LGVs) over 3500kg GVW will also be fitted where possible with the latest technology to reduce fuel consumption and exhaust emissions	Promoting low emission transport	Ongoing	In progress	Not funded		ongoing	This fuel saving equipment is now standard requirement on all vehicle specifications in this class. And will continue to be fitted where possible

								All heavy RCV vehicle replacements are specified and fitted with in cab night heaters to reduce vehicle idling time.
8	Vehicle fleet efficiency HGV's will have engines which are all built to the latest European legal limits on exhaust gases (Euro 6) specification. Which will result in the vehicles emitting the lowest possible exhaust gases	Promoting low emission transport	Ongoing	In progress	Not funded		ongoing	All new vehicles South Ayrshire Council procure will continue to be to the latest European exhaust emissions standards. Alternative fuel will also always be considered where possible
9	Vehicle fleet efficiency Cars, minibuses, vans & pick-ups up to 3500GVW where possible will be fitted with speed limiters, rev limiters and stop/start technology to maximise fuel efficiency and reduce exhaust emissions. It is hoped car fleet to fully electric or hybrid by 2025	Promoting low emission transport	2025	In progress	Not funded		ongoing	This fuel saving equipment is now standard requirement on all vehicle specifications in this class. And will continue to be fitted where possible.  South Ayrshire Council now have 66 full EVs & 1 PHEVs on our Fleet.
10	Vehicle fleet efficiency Departments be asked to use smaller vans to replace larger vans where practical and small vehicles will be transitioned to electric vehicles (EVs) between now and 2025. Although unfortunately at this time the infrastructure of charging points will restrict the number of EVs we can put into our	Promoting low emission transport	2025	In progress	Not funded		ongoing	Our Property Maintenance Service have recently added EVs to their Fleet. These EVs have replaced diesel vans and cars.  Due to costs there has been a reduced requirement for vehicles  The depot at McCalls Avenue has a new,

	fleet, however the use of charging points is being assessed to ensure efficiency							grant funded, rapid charger (50 KWH)  This will begin trials later when the circumstances allow to see how feasible it is to rotate multiple vehicles based on sharing the one rapid charger available.
11	Vehicle fleet efficiency The vehicle tracking system has also help reduce our fuel usage by identify routes where vehicles were passing each other on journeys to jobs. In particular this applied to our Property Maintenance section. The system now allows the nearest vehicle to attend call-outs etc. The vehicle tracking system was being improved in 2020 which will further the benefits it can provide.	Promoting low emission transport		In progress	Not funded		ongoing	Department to monitor and review journeys which overlap.  Vehicle utilisation reports are being created to assess whether the number of vehicles supplied is suitable for our needs. Fleet Management service review has been completed which has increased staff levels. This will allow for further investigations into maximising of fleet vehicle utilisation
12	Vehicle Idling Patrols vehicle idling work which we carried out in 2023.. We also put out communications to social media reminding members of the public to switch off their engines when stationary for more than 5 minutes	Promoting low emission transport		In progress	Funded Scottish Government Grant		ongoing	Well received by members of the public  Main source of air pollution in SA is road traffic

## **3 Air Quality Monitoring Data and Comparison with Air Quality Objectives**

### **3.1 Summary of Monitoring Undertaken**

#### **3.1.1 Automatic Monitoring Sites**

This section sets out what monitoring has taken place and how local concentrations of the main air pollutants compare with the objectives.

South Ayrshire Council undertook automatic (continuous) monitoring at 2 sites during 2023. Table A.1 in Appendix A shows the details of the sites. National monitoring results are available at <http://www.scottishairquality.scot/>

Maps showing the location of the monitoring sites are provided in Figure 2 Further details on how the monitors are calibrated and how the data has been adjusted are included in Appendix C.

#### **3.1.2 Non-Automatic Monitoring Sites**

South Ayrshire Council undertook non- automatic (passive) monitoring of NO<sub>2</sub> at 20 sites during 2023. Table A.2 in Appendix A shows the details of the sites.

Maps showing the location of the monitoring sites are provided in Figure 1 Further details on Quality Assurance/Quality Control (QA/QC) and bias adjustment for the diffusion tubes are included in Appendix C.

### **3.2 Individual Pollutants**

The air quality monitoring results presented in this section are, where relevant, adjusted for annualisation and bias. Further details on adjustments are provided in Appendix C.

#### **3.2.1 Nitrogen Dioxide (NO<sub>2</sub>)**

Table A.3 in Appendix A compares the ratified and adjusted monitored NO<sub>2</sub> annual mean concentrations for the past five years with the air quality objective of 40 µg/m<sup>3</sup>.

For diffusion tubes, the full 2023 dataset of monthly mean values is provided in Appendix B.

Table A.4 in Appendix A compares the ratified continuous monitored NO<sub>2</sub> hourly mean concentrations for the past five years with the air quality objective of 200µg/m<sup>3</sup>, not to be exceeded more than 18 times per year.

### **3.2.2 Particulate Matter (PM<sub>10</sub>)**

Table A.5 in Appendix A compares the ratified and adjusted monitored PM<sub>10</sub> annual mean concentrations for the past five years with the air quality objective of 18µg/m<sup>3</sup>.

Table A.6 in Appendix A compares the ratified continuous monitored PM<sub>10</sub> daily mean concentrations for the past five years with the air quality objective of 50µg/m<sup>3</sup>, not to be exceeded more than seven times per year.

### **3.2.3 Particulate Matter (PM<sub>2.5</sub>)**

Table A.7 in Appendix A compares the ratified and adjusted monitored PM<sub>2.5</sub> annual mean concentrations for the past five years with the air quality objective of 10µg/m<sup>3</sup>.

There were no exceedances of the air quality objectives reported for PM<sub>2.5</sub> in 2023 at either of our two continuously monitored sites

### **3.2.4 Sulphur Dioxide (SO<sub>2</sub>)**

Table A.8 in Appendix A compares the ratified continuous monitored SO<sub>2</sub> concentrations for year 2022 with the air quality objectives for SO<sub>2</sub>.

We did not monitor SO<sub>2</sub> concentrations during 2022 within SAC. We are not aware of any changes that have occurred in their status since submission of the previous report.

### **3.2.5 Carbon Monoxide, Lead and 1,3-Butadiene**

We did not undertake any monitoring for Carbon Monoxide, Lead or 1,3-Butadiene within SAC in 2021. We are not aware of any changes that have occurred in their status since submission of the previous report.

## **4 New Local Developments**

We are not aware of any new local developments within SAC that may affect air quality.

### **4.1 Road Traffic Sources**

We are not aware of any new road traffic sources within SAC that have the potential to affect air quality.

### **4.2 Other Transport Sources**

We are not aware of any new road traffic sources within SAC that have the potential to affect air quality.

### **4.3 Industrial Sources**

We are not aware of any new industrial sources within SAC that has the potential to affect air quality.

### **4.4 Commercial and Domestic Sources**

There are no new commercial or domestic sources we are aware of within SAC that would have the potential to affect air quality.

### **4.5 New Developments with Fugitive or Uncontrolled Sources**

There are no new developments we are aware of within SAC that would have the potential to produce a source of fugitive or uncontrolled particulate matter.

## 5 Planning Applications

There are no new planning applications in 2023 we are aware of within SAC that would have the potential to affect air quality.

## **6 Conclusions and Proposed Actions**

### **6.1 Conclusions from New Monitoring Data**

There were no exceedances of the air quality objectives identified within SAC in 2023. Therefore, there is no need to progress to a detailed assessment nor is there any need to consider air quality management areas.

Our next Progress Report is due by the end of June 2025.

### **6.2 Conclusions relating to New Local Developments**

There were no local developments during 2023 in SAC that required consideration

### **6.3 Proposed Actions**

There were no exceedances of the air quality objectives identified within SAC in 2023. Therefore, there is no need to progress to a detailed assessment nor is there any need to consider air quality management areas.

Our next Progress Report is due by the end of June 2025.

**Notes:**

Exceedances of the NO<sub>2</sub> annual mean objective of 40µg/m<sup>3</sup> are shown in bold.

NO<sub>2</sub> annual means exceeding 60µg/m<sup>3</sup>, indicating a potential exceedance of the NO<sub>2</sub> 1-hour mean objective are shown in **bold and underlined**.

Means for diffusion tubes have been corrected for bias. All means have been “annualised” as per LAQM.TG(22) if valid data capture for the full calendar year is less than 75%. See Appendix C for details.

- (1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.
- (2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

**Table A.4 – 1-Hour Mean NO<sub>2</sub> Monitoring Results, Number of 1-Hour Means > 200µg/m<sup>3</sup>**

Site ID	Site Type	Monitoring Type	Valid Data Capture for Monitoring Period (%) <sup>(1)</sup>	Valid Data Capture 2022 (%) <sup>(2)</sup>	2019	2020	2021	2022	2023
CM1	Roadside	Automatic		34.5	0 (57)	0	0	0	0
CM2	Roadside	Automatic		58.6	0	0 (54)	0 (57)	0	0

**Notes:**

Exceedances of the NO<sub>2</sub> 1-hour mean objective (200 µg/m<sup>3</sup> not to be exceeded more than 18 times/year) are shown in bold.

If the period of valid data is less than 85%, the 99.8<sup>th</sup> percentile of 1-hour means is provided in brackets.

(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

**Table A.5 – Annual Mean PM<sub>10</sub> Monitoring Results (µg/m<sup>3</sup>)**

Site ID	Site Type	Valid Data Capture for Monitoring Period (%) <sup>(1)</sup>	Valid Data Capture 2023(%) <sup>(2)</sup>	2019	2020	2021	2022	2023

CM2	Roadside		96	<b>Not Monitored</b>	<b>Not Monitored</b>	<b>11.3</b>	12.5	<b>11.3</b>

**Notes:**

Exceedances of the PM<sub>10</sub> annual mean objective of 18 µg/m<sup>3</sup> are shown in bold.

All means have been “annualised” as per LAQM.TG(22), valid data capture for the full calendar year is less than 75%. See Appendix C for details.

(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

**Table A.6 – 24-Hour Mean PM<sub>10</sub> Monitoring Results, Number of PM<sub>10</sub> 24-Hour Means > 50µg/m<sup>3</sup>**

Site ID	Site Type	Valid Data Capture for Monitoring Period (%) <sup>(1)</sup>	Valid Data Capture 2022 (%) <sup>(2)</sup>	2019	2020	2021	2022	2023
CM1	Roadside		90			<b>0</b>	<b>7</b>	<b>3</b>
CM2	Roadside		79			1	1	0

**Notes:**

Exceedances of the PM<sub>10</sub> 24-hour mean objective (50 µg/m<sup>3</sup> not to be exceeded more than seven times/year) are shown in bold.

If the period of valid data is less than 85%, the 98.1st percentile of 24-hour means is provided in brackets.

(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

**Table A.7 – Annual Mean PM<sub>2.5</sub> Monitoring Results (µg/m<sup>3</sup>)**

Site ID	Site Type	Valid Data Capture for Monitoring Period (%) <sup>(1)</sup>	Valid Data Capture 2022 (%) <sup>(2)</sup>	2019	2020	2021	2022	2023
CM1	Roadside		90	<b>6.3</b>	<b>4.9</b>	<b>5.0</b>	<b>6.2</b>	5.9
CM2	Roadside		79	6.7	6.3	6.0	6.2	5.5

**Notes:**

Exceedances of the PM<sub>2.5</sub> annual mean objective of 10 µg/m<sup>3</sup> are shown in bold.

All means have been “annualised” as per LAQM.TG(22), valid data capture for the full calendar year is less than 75%. See Appendix C for details.

(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

**Table A.8 – SO<sub>2</sub> 2022 Monitoring Results, Number of Relevant Instances**

Site ID	Site Type	Valid Data Capture for monitoring Period (%) <sup>(1)</sup>	Valid Data Capture 2022 (%) <sup>(2)</sup>	Number of 15-minute Means > 266 µg/m	Number of 1-hour Means > 350 µg/m	Number of 24-hour Means > 125 µg/m
N/A						
N/A						

**Notes:**

Exceedances of the SO<sub>2</sub> objectives are shown in bold (15-min mean = 35 allowed a year, 1-hour mean = 24 allowed a year, 24-hour mean = 3 allowed a year)

If the period of valid data is less than 85%, the relevant percentiles are provided in brackets (15-Minute means: 99.9<sup>th</sup> percentile, 1-hour means: 99.7<sup>th</sup> percentile, 24-hour means: 99.2<sup>nd</sup> percentile).

(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

## Appendix B: Full Monthly Diffusion Tube Results for 2023

### Notes:

(1) See Appendix C for details on bias adjustment

## **Appendix C: Supporting Technical Information / Air Quality Monitoring Data QA/QC**

### **New or Changed Sources Identified South Ayrshire Council During 2023**

South Ayrshire Council has not identified any new sources relating to air quality within the reporting year of 2023.

### **Additional Air Quality Works Undertaken by South Ayrshire Council During 2023**

South Ayrshire Council has not completed any additional works within the reporting year of 2023.

### **QA/QC of Diffusion Tube Monitoring**

Within South Ayrshire, diffusion tubes are supplied, changed and analysed by Glasgow Scientific Services which is operated by Glasgow City Council. The method of preparation is 20% TEA in water. Monitoring was completed in adherence with the 2023 Diffusion Tube Monitoring Calendar.

GSS Scored the following results for 2023 in the laboratory summary performance for AIR NO<sub>2</sub> PT: Jan/March 50%, April – December no results were available.

### **Diffusion Tube Annualisation**

All diffusion tube monitoring locations within South Ayrshire Council recorded data capture of 75% therefore it was not required to annualise any monitoring data. In addition, any sites with a data capture below 25% do not require annualisation.

### **Diffusion Tube Bias Adjustment Factors**

South Ayrshire Council have applied a national bias adjustment factor of 1.05 to the 2023 monitoring data. A summary of bias adjustment factors used by South Ayrshire Council over the past five years is presented in Table C.1.

### **Table C.1 – Bias Adjustment Factor**

Year	Local or National	If National, Version of National Spreadsheet	Adjustment Factor
2023	National	03/23- (6 studies)	1.05
2022	National	03/23- (6 studies)	1.05
2021	National	03/22- (8 studies)	1.12
2020	National	03/21 (10 studies)	0.96
2019	National	03/20 (4 studies)	0.86

### **NO<sub>2</sub> Fall-off with Distance from the Road**

No diffusion tube NO<sub>2</sub> monitoring locations within South Ayrshire Council required distance correction during 2023.

### **QA/QC of Automatic Monitoring**

Both of the automatic sites within South Ayrshire are part of the Scottish Air Quality Programme and are audited twice per year by Ricardo- AEA. Ricardo also carried out 12 months of fortnightly LSO calibration of the NO<sub>x</sub> and PM analysers at both of our automatic sites. All data is ratified and scaled by Ricardo before being finalised. Servicing and repairs are carried out by Acoem UK.

### **PM<sub>10</sub> and PM<sub>2.5</sub> Monitoring Adjustment**

The type of PM<sub>10</sub>/PM<sub>2.5</sub> monitor(s) utilised within South Ayrshire Council do not required the application of a correction factor.

### **Automatic Monitoring Annualisation**

All automatic monitoring locations within South Ayrshire Council recorded data capture of greater than 75% therefore it was not required to annualise any monitoring data. In addition, any sites with a data capture below 25% do not require annualisation.

### **NO<sub>2</sub> Fall-off with Distance from the Road**

No automatic NO<sub>2</sub> monitoring locations within South Ayrshire Council required distance correction during 2023.

**Table C.2 – Annualisation Summary (concentrations presented in  $\mu\text{g}/\text{m}^3$ )**

T

## Glossary of Terms

Abbreviation	Description
AQAP	Air Quality Action Plan - A detailed description of measures, outcomes, achievement dates and implementation methods, showing how the LA intends to achieve air quality limit values'
AQMA	Air Quality Management Area – An area where air pollutant concentrations exceed / are likely to exceed the relevant air quality objectives. AQMAs are declared for specific pollutants and objectives
APR	Air quality Annual Progress Report
AURN	Automatic Urban and Rural Network (UK air quality monitoring network)
Defra	Department for Environment, Food and Rural Affairs
DMRB	Design Manual for Roads and Bridges – Air quality screening tool produced by Highways England
FDMS	Filter Dynamics Measurement System
LAQM	Local Air Quality Management
NO <sub>2</sub>	Nitrogen Dioxide
NO <sub>x</sub>	Nitrogen Oxides
PM <sub>10</sub>	Airborne particulate matter with an aerodynamic diameter of 10µm (micrometres or microns) or less
PM <sub>2.5</sub>	Airborne particulate matter with an aerodynamic diameter of 2.5µm or less
QA/QC	Quality Assurance and Quality Control
SO <sub>2</sub>	Sulphur Dioxide
